Service Requests Performance Dashboard

Power BI | Power Query | DAX | Data Analysis | Data Visualization

Project Overview

This project analyzes service request data to evaluate operational performance, monitor service delivery efficiency, and measure compliance with target resolution times. The dashboard provides an interactive overview of service operations, helping stakeholders monitor key performance indicators and identify areas that may require operational improvement.

Business Problem

Organizations often face challenges in monitoring service operations when performance metrics are distributed across multiple reports and operational data lacks centralized visibility. The objective of this project was to develop an interactive dashboard that consolidates key operational metrics and enables stakeholders to monitor request volumes, completion rates, resolution times, and SLA compliance across regions and service categories.

Data Preparation & Analysis

- Cleaned and transformed raw data using Power Query.
- Validated data quality and handled missing values.
- Developed calculated measures and KPIs using DAX.
- Analyzed request status distribution.
- Evaluated average resolution time for completed requests.
- Compared actual resolution times against target durations.
- Measured SLA compliance by evaluating completed requests against their target resolution times.
- Analyzed operational performance by region and service type.
- Built executive and operational reporting views.
- Created interactive filters for performance analysis.

Key Performance Indicators (KPIs)

- Total Requests: 1,200
- Completed Requests: 980
- In-Progress Requests: 133
- Cancelled Requests: 87
- Completion Rate: 81.67%

- SLA Compliance Rate: 83.57%
- Average Resolution Time: 3.9 Days
- Completed Requests Exceeding Target Duration: 161

Dashboard Features

Executive Overview

- Executive KPI Summary
- Monthly Requests Trend
- Request Status Distribution
- Regional Performance Analysis
- Service Category Analysis

Operational Analysis

- Average Resolution Time by Region
- Average Resolution Time by Service Type
- Actual vs. Target Resolution Duration
- Monthly Resolution Trend
- SLA Performance Monitoring

Interactive Features

- Region Filtering
- Service Type Filtering
- Cross-Visual Interactions

Tools & Skills Demonstrated

Power BI • Power Query • DAX • Data Cleaning • KPI Development • Data Analysis • Data Visualization • SLA Analysis • Operational Analytics • Business Intelligence

Business Value

The dashboard transforms operational data into actionable insights that support performance monitoring, SLA management, and continuous service improvement initiatives. It provides a consolidated view of service performance, helping stakeholders identify potential operational bottlenecks, monitor service efficiency, and evaluate compliance with target service levels.
